Go Above and Beyond with TYPO3 v11 LTS

Get on board with the newest version of the TYPO3 fleet!

TYPO3

@typo3

With the release of TYPO3 v11 LTS, we have reached a major milestone.

The newest TYPO3 LTS release comes with a shipload of improvements for all, from editors to developers, and even marketers.

Explore TYPO3's hallmark features:

- Secure, performant, and robust: professional organizations trust TYPO3.
- Deliver engaging content to users on any device, anywhere.
- Where developers, editors, and marketers can collaborate on professional-grade content.
- Launch from a strong foundation. Integrate and extend as you grow.
- Backed by professional community, made in a commercial ecosystem.
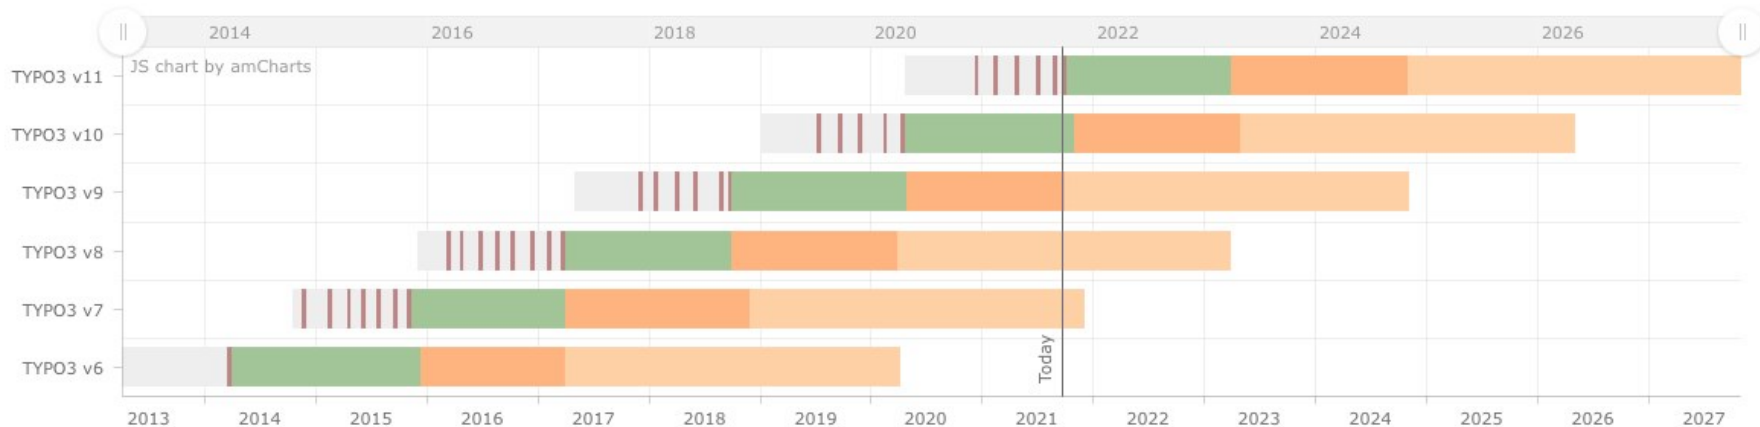

TYPO3 DELIVERS BLAZINGLY FAST, FLEXIBLE CONTENT.

POWERED BY AN ENTERPRISE OPEN-SOURCE CMS, AND BACKEND BY A VIBRANT PROFESSIONAL COMMUNITY AND A COMMERCIAL ECOSYSTEM.

USE TYPO3 TO CONNECT AND COMPETE IN TODAY'S LANDSCAPE WITH THE RICHEST DIGITAL EXPERIENCES.

Welcome to the largest and most reliable TYPO3 fleet ever!

- We current support five official TYPO3 versions (including ELTS).

- Regular support for TYPO3 v11 LTS will run from 5th October 2021 – 31st October 2024.

- Starting November 2024, several plans for extended long-term support (ELTS) will be made available for up to 3 years of official support.

Ready for Liftoff:
Reliable Versioning Processes with Workspaces

Ensure TYPO3 aligns with your content production and publishing process with Workspaces. Version 11 streamlines workflows and fixes a lot of smaller bugs.

- Set up custom workspaces to fit your in-house production and publishing workflows.

- Include multiple review cycles to ensure the highest-quality standards.

- Establish user-level access rights and editing/publishing restrictions.

Shields Up:
Improved Security with Multi-Factor Authentication

- Make your TYPO3 installations more secure by setting up Two-Factor (2FA) or Multi-Factor Authentication (MFA) for backend users.

- Integrate with multiple MFA providers – whether via Time-Based-One-Time-Password (TOTP) or secondary device (e.g. Yubikey).

Escape the Orbit:
Big Backend Improvements

- Efficient routes for backend editing save clicks and time

- Housekeeping for stable features you already love

- Lightweight and fast modules in the backend — technology you feel instead of see, such as the SVG-based file and pagetree browsing

Outside the Milky Way:
All-New Everything

- New backend languages, because TYPO3 wants to serve everyone:
    - Shona is the language of the Shona people of Zimbabwe and spoken by more than 10 million people including dialects.
    - Welsh (historically known as "Cymbric") is spoken natively in Wales.
- Support for modern PHP versions and stabilizations in multiple modules

Into New Galaxies:
New Backend Features for Editors

TYPO3 v11 improved the system for end-users by introducing a variety of helpful features for editors.

As an editor, you can now:

- Customize your list columns to get a clear perspective on your data

- Share and export direct links to the TYPO3 backend (login required, of course!)

- Resize the pagetree component to customize the backend to your preferences

- Fewer clicks to reach your goals (e.g. the multi-select feature in filelist)

Warp Speed

Go above and beyond – check out the newest TYPO3 11.5 LTS version. Get ready to explore new galaxies!
