UNIFIED EDITOR EXPERIENCE

In TYPO3 v11 LTS, we updated every module's interface — taking special care with list view and filelist — and created a smoother content editing experience. Users can now easily select which columns they want displayed in list view.

Improvements within the download functionality allow editors to choose, which columns are actually needed. Less frequently needed functionalities are now stashed behind the already well known "three dot menu".

SHARING BACKEND LINKS

If multiple editors collaborate on a website's content, they can now easily point their colleagues to a specific target in the backend—not limited to pages. Backend users can, for example, copy a link to a specific content element to their clipboard, then share the deep link in just a few clicks.

On all pages where deep linking is available, backend users can click on the share button to open a context menu. From the menu they can either create a TYPO3-internal bookmark or copy the link of the page to their clipboard.

ADVANCED FILELIST MODULE

The filelist module's new functionality makes finding, selecting, and adding files to content elements a breeze. TYPO3 v11 LTS also includes updates to the file tree and file management:
An optimized, consistent user interface for file management, an advanced search for assets and files, and the ability to download (multiple) files or a folder as a zip file.

IMPROVED COLLABORATION FEATURES

Workspaces now has a faster, more streamlined interface. In TYPO3 v11 LTS, we reduced Workspaces' loading time, enabling backend editors to collaboratively edit and publish new versions of content quickly. Editors can share links that lead directly to a single content element and, in one click, another editor can seamlessly jump into the record and review the draft.
