Filter

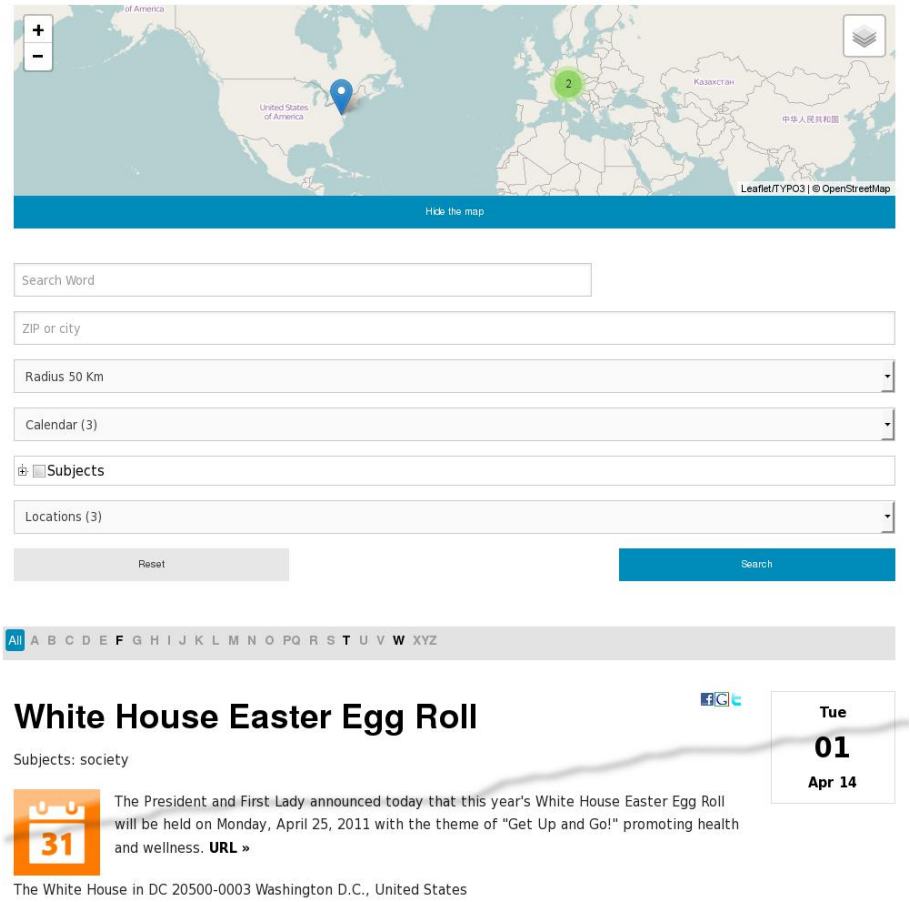

Illustration 2: The Browser – TYPO3 without PHP – supports a lot of filters

The Browser – TYPO3 without PHP – simplifies to filter data by categories, by a radial search or by displaying it in a map.

Example at http://typo3-organiser.de > Calendar

Responsive

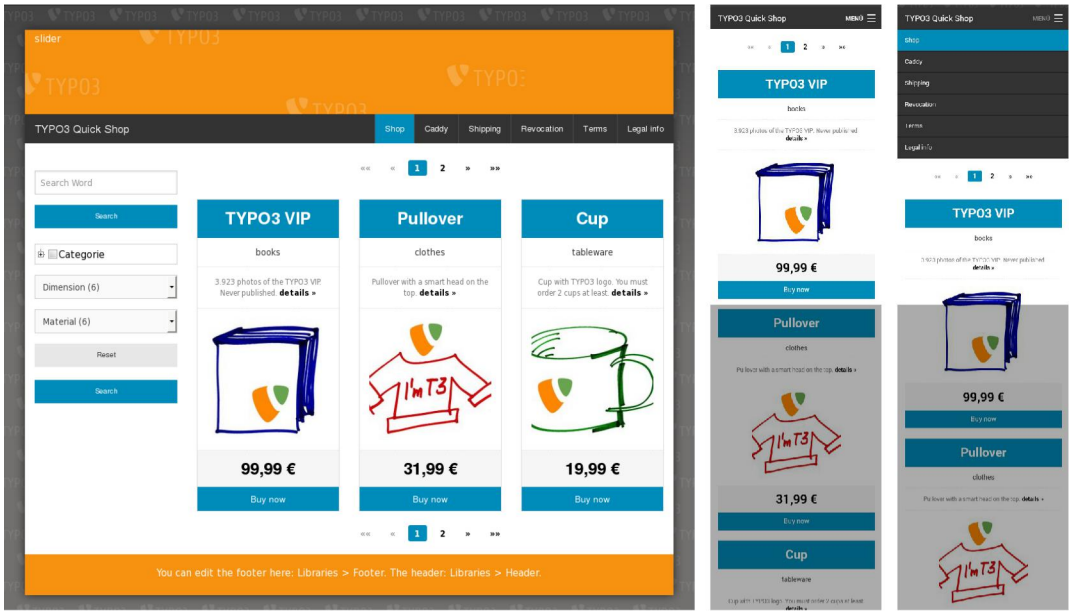

Illustration 3: List view on a desktop (left) and on a smartphone (right)

The Browser – TYPO3 without PHP – is responsive. Templates are optimised for desktops, tablets and smartphones.

Ready-to-use Extensions

If you like to test the Browser – TYPO3 without PHP –, you can install ready-to-use extensions with one mouse click.

See the illustration below for the extension Organiser – TYPO3 for Lobbies and Organisers.

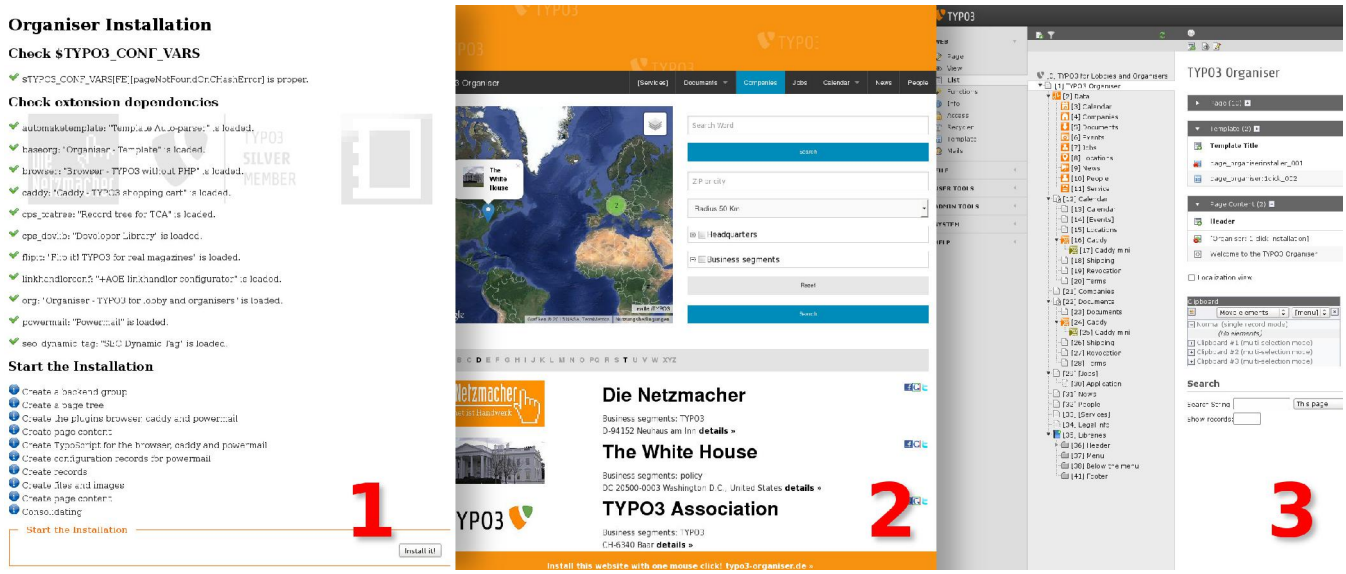

Illustration 4: Install the Organiser with one click! Installer button (1). Result in the frontend (2) and in the backend (3).

Introduction

The Browser – TYPO3 without PHP – enables TYPO3 developers and TYPO3 integrators to develop own extensions without any own plugin and without any own line PHP code. Use the Browser and you will develop TYPO3 eight times faster! The "Error: Reference source not found" is illustrated on page Error: Reference source not found Error: Reference source not found.

What does it do?

- With one line TypoScript you will get a result list with a search form, a page browser and an index browser for your tt_news records or for any other database of any other extension. With one line TypoScript more you will get a single display of your record extended with a record browser.
- The extension simplifies the team play of HTML templates and TypoScript.
  Example with tt_news: The TypoScript code "select = tt_news.title" and the HTML marker ###TT_NEWS.TITLE### will display news titles in list and single views in the frontend.
- The Browser discovers relations between tables like tt_news and tt_news_cat automatically. It displays data of related tables in list and single views. The extension builds the SQL relations automatically. If it fails, it is possible to configure the relations manually.
- The Browser has it's own search engine and it offers filters. You can filter for data areas like 2009 to 2011 or 10.000 EUR to 20.000 EUR. Filter can be check boxes, radio buttons, select boxes, lists and tree views.
- BrowserMaps – the Browsers map module – enables you, to publish your data with Google Maps and OpenStreetMap.
  - The Browser offers a radial search. For example: Dislplay all hits within a radius of 50 kilometers with the center of Berlin.
  - BrowserMaps is able to add latitude and longitude to any address data while editing a record and periodically by a cron job.
- The Browser supports the export of data in CSV format and XML format (like RSS feeds).
- The Browser is multiple plugin able: You can use the Browser plugins on a page unlimited.
  - Plugins are able to control other plugins. They can hide or display depending on URL parameters.
- The Browser is supported by the DRS – Development Reporting System. The DRS displays both: errors and work flow. For example: If you like to inspect the performance, you can enable the performance report. The DRS investigates bottlenecks and if it will find some, it try to suggest a solution.
- You can install Browser samples ready-to-use with one mouse-click:
  - Organiser – TYPO3 for the Lobby and the Organisers[1]
  - Quick Shop – Responsive, ready-to-use, one-click-installation[2]
- The Browser can recover extensions, which are running in TYPO3 4.x only.
- The Browser supersedes template engines like Smarty.

What do you need?

- TYPO3 from 4.5 to 6.x
- Experience in TypoScript.
- The extension devlog, if you want to use the DRS – the Development Reporting System.

Audience

- TYPO3 integrators, who have less knowledge about TYPO3 and TypoScript and have little demands.
- TYPO3 developers and TYPO3 agencies, who have a lot of experience with TYPO3 and TypoScript and have high demands.

1 http://typo3-organiser.de/
2 http://typo3-quick-shop.de/

Non possible features

- The Browser doesn't support
  - neither versioning
  - nor workspaces.

Installation

Extension Manager

Open the extension manager, download the extension Browser (extkey: browser) and install it.

Filter: AND

[4.8.8]

Filter items can queried by OR and AND.

See

- Browser Tutorial Filter and Search
  http://typo3-browser.de/typo3conf/ext/browser_tut_search_en/doc/manual.pdf

Filter: Checkboxes for Selectbox

[4.8.8]

If you are using a selectbox in the backend, you can render the items both ways in the frontend:

- as selectbox or
- as checkboxes.

See

- Browser Tutorial Filter and Search
  http://typo3-browser.de/typo3conf/ext/browser_tut_search_en/doc/manual.pdf

TYPO3 6.1

[4.8.10]

The Browser should be fit for TYPO3 6.1. Especially:

- Documents will rendered without any conflict with the FAL.
- Proper form in the extension manager.

4.8

BrowserMaps / Custom Map: controlling of map visibility

[4.8.5]

If you are using a custom map, you can controll the visibility of the wms (Google Maps or OpenStreetMap) with the property: wmsVisibility. wmsVisibility is false by default. See

```
configuration = {
                  language        : 'de'         //  default | en | de
                , ...
                , customMap       : {
                    type: 'Image'
                  , ...
                  , wmsVisibility : true
                }
```

BrowserMaps / Routes: controlling the error prompt

[4.7.0]

Configurable error prompt in case of missing categories / marker (POI). See

- TypoScript Constant Editor > Browsermaps – Debugging > Route Relations

BrowserMaps / Routes: evaluation of relations

[4.8.5]

If an editor saves a route record (path, marker (POI) and category), the Browser – TYPO3 without PHP – evaluates the relations. If there is an unproper relation, the editor will get a prompt.

jQuery: live() -> on()

[4.8.4]

The Browser javascript is using the jQuery method on() instead of live(). live() is supported by jQuery to version 1.8 only.

Radial Search (Umkreissuche)

[4.7.0]

You can geocode your address data automatically. See the Tutorial BrowserMaps at

- http://typo3.org/extensions/repository/view/radialsearch/

Recursion Guard – configurable by Constant Editor

[4.8.5]

The recursion guard is configurable by the constant editor. See

- TypoScript Constant Editor > Browser – Advanced > Recursion Guard

The Browser checks fault-prone loops by the recursion guard limit. If a loop cross this limit, the workflow will exit. You will get an error prompt in the frontend. The limit is by default 10.000 runs per one loop.

User function: render_table

[4.8.0]

tt_content.table.20 can used by tt_content records only.

The Browser extends tt_content.table.20 for every database. See

- a TypoScript example
- and further information

at

- HTML http://typo3.org/extensions/repository/view/browser_tut_userfunc_en
- PDF http://typo3-browser.de/typo3conf/ext/browser_tut_userfunc_en/doc/manual.pdf

Quick Shop is using this method for datasheets.

tt_address tutorial (german)

[4.7.0]

Matthias Haack has written and published a tutorial for tt_address and the Browser – TYPO3 without PHP.

The tutorial is in German language. See

- http://blog.matthaa.de/die-typo3-extension-browser-typo3-without-php-anwendungsbeispiel-mit-tt_address-daten/

Matthias Haak is Certified TYPO3 Integrator. See http://www.matthaa.de

TYPO3 6.x

[4.7.4]

The Browser – TYPO3 without PHP – is fit for TYPO3 6.x.
