

OmniPay-Helcim

Helcim-JS (Authorize, success path)

Some helper methods to aid construction of the form would be good here.

There is no 3D-secure or equivalent here at this time.

The transaction can potentially be manipulated by the user during the POSTs in both directions, so it is necessary to check the transaction logged on Helcim via the Helcim Direct API.

A secret token is used to access the direct back-end services.

It does seem that ONLY a successful payment or authorisation will ever return by this path.
