Table of Contents

Introduction

What does it do?

This extension generates a list of concerts for bands.

Users manual

Sysfolder

First you have to create a sysfolder. Edit the page properties and choose "Contains Plugin" =>
"Concertlist". You don't have to do this, but your folder icon will change, so it looks more nice.

Create new records from the type "Concert". You have the following fields:

- Title

- Date

- Location

- Address

- Description

- Private Concert (Boolean)
  Maybe you have public and private concerts (partyband)

- Status
  planned, booked

- Fee
  Maybe you have an internally page, were you want to list the fees for your concerts

- Mark as new until
  You can mark a concert as new for a specific time

- Website
  You can add any number of Urls

Plugin

Now go to the page, where you want to display the concertlist and create a new content-element
=> plugin "Concertlist". Set the values for your concertlist.

You have to input the pid (Page Id) of the sysfolder in the constant editor => See more in the
chapter "Administration".

Weekdays

You have the possibility to output weekdays. Use the follwing marker in your template:

Short (Su, Mo, Tu,...)

<f:translate key="tx_pbconcertlist_domain_model_concert.weekday.short.
{pb:weekday(date:concert.date)}" />

Long (Sunday, Monday, Tuesday,...)

<f:translate key="tx_pbconcertlist_domain_model_concert.weekday.long.
{pb:weekday(date:concert.date)}" />

If you would like to change the strings, just change the typoscript:

plugin.tx_pbconcertlist{

```
_LOCAL_LANG.de{
  # 0-6 (Sunday to Saturday)
    tx_pbconcertlist_domain_model_concert.weekday.long.0 = Long Version of Sunday
    tx_pbconcertlist_domain_model_concert.weekday.long.1 = Long Version of Monday
  }
}
```

Administration

Installation

- Download the extension and install it with the extension manager

- Include the static Typoscript in your template

- Go to the constant editor and input the pid (Page Id) from the sysfolder, where the Concerts are stored

- If you want to create your own template, you can change the path to this template in the constant editor ("Path to template root (FE)"). Be sure that you have a folder named "Concert" within this path and in this folder a file named "List.html".

  Example:
  You change the path to: "fileadmin/templates/extension/". Then your template has to be here: "fileadmin/templates/extension/Concert/List.html".

  Look at the original template, this will help you to create your own template:
  EXT:pb_concertlist/Resources/Private/Templates/Concert/List.html

Known problems

None at the moment.
