## Introduction

## The Facts

# Introduction

---

## TYPO3 Version 9.2 – The Facts

- Release date: 10 April 2018
- Release type: Sprint Release

# Introduction

---

## System Requirements

- PHP version 7.2  
(will possibly be lowered to PHP 7.1 or 7.0 for future releases, decision pending)
- PHP settings:
  - `memory_limit >= 128M`
  - `max_execution_time >= 240s`
  - `max_input_vars >= 1500`
  - compilation option `--disable-ipv6` must not be used
- Most database servers supported by **Doctrine DBAL** also work with TYPO3. Tested DB engines are for example:

# Introduction

---

## Development, Release and Maintenance Timeline

### TYPO3 v9

### Extended Support

The [TYPO3 GmbH](#) offers further support options for TYPO3 v9 LTS even after 31 October 2021 for up to two additional years.

# Introduction

---

## TYPO3 v9 Roadmap

Estimated release dates and their primary focus:

- v9.0 12/Dec/2017 Install Tool and Page Tree Refactoring, Unified Page Translations
- v9.1 30/Jan/2018 Redirect Handling
- v9.2 10/Apr/2018 Site Handling
- v9.3 12/Jun/2018 URL Routing for Pages
- v9.4 04/Sep/2018 Frontend Editing (Feature Freeze)
- v9.5 02/Oct/2018 LTS Release

<https://typo3.org/news/article/typo3-v9-roadmap/>

<https://typo3.org/typo3-cms/roadmap/>

# Introduction

---

## Installation

- Official *classic* installation procedure under Linux/Mac OS X (DocumentRoot for example `/var/www/site/htdocs`):

```
$ cd /var/www/site
$ wget --content-disposition get.typo3.org/9.2
$ tar xzf typo3_src-9.2.0.tar.gz
$ cd htdocs
$ ln -s ../typo3_src-9.2.0 typo3_src
$ ln -s typo3_src/index.php
$ ln -s typo3_src/typo3
$ touch FIRST_INSTALL
```

- Symbolic links under Microsoft Windows:
  - Use `junction` under Windows XP/2000
  - Use `mklink` under Windows Vista and Windows 7 and higher

# Introduction

---

## Installation Using `composer`

- Installation using `composer` under Linux/Mac OS X:

```
$ cd /var/www/site/  
$ composer create-project typo3/cms-base-distribution CmsBaseDistribution ~9
```

- Alternatively, create your custom `composer.json` file and run:

```
$ composer install
```

Further details and examples for `composer.json` files are available at:

<https://composer.typo3.org>

## Chapter 1: Backend User Interface

# Backend User Interface

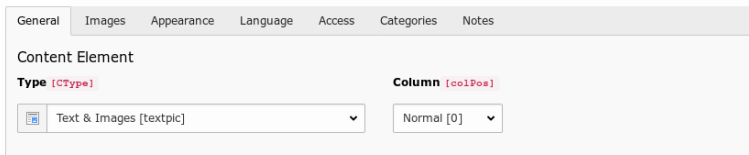

---

## Duplicate Content Element

Backend users (e.g. editors) can easily clone ("duplicate") a content element by a click of a button.

Edit Page Content "Headline" on page "Page 1"

A screenshot of the TYPO3 content element configuration form. The form has several tabs: General, Images, Appearance, Language, Access, Categories, and Notes. The 'General' tab is selected. The form is titled 'Content Element'. It has two main sections: 'Type [CType]' and 'Column [colPos]'. The 'Type' section has a dropdown menu with 'Text & Images [textpic]' selected. The 'Column' section has a dropdown menu with 'Normal [0]' selected.

# Backend User Interface

## Show Value of Fields

In debug mode (`$GLOBALS['TYPO3_CONF_VARS']['BE']['debug']`), values of fields are displayed in square brackets. These are the *real* values that are written into the database (BE administrator users only).

Edit Page Content on page "test"

The screenshot displays the 'Edit Page Content' configuration for page "test". The interface is divided into several sections:

- General**: Includes tabs for General, Images, Appearance, Language, Access, Categories, and Notes.
- Content Element Layout**:
  - Layout** [layout]: A dropdown menu showing "Default [0]".
  - Frame** [frame\_class]: A dropdown menu with a list of options: "Default [default]", "Ruler Before [ruler-before]", "Ruler After [ruler-after]", "Indent [indent]", "Indent, 33/66% [indent-left]", "Indent, 66/33% [indent-right]", and "No Frame [none]".
  - Space Before** [space\_before\_class]: A dropdown menu showing "None".
  - Space After** [space\_after\_class]: A dropdown menu showing "None".
- Links**:
  - Show in Section Menus** [sectionIndex]: A checkbox labeled "Enabled [1]" with a green checkmark.
  - Append with Link to Top of Page** [linkToTop]: A checkbox labeled "Enabled [0]" which is unchecked.

Red arrows point to the values in square brackets: [0] for 'Layout', [1] for 'Show in Section Menus', and [0] for 'Append with Link to Top of Page'. A dropdown menu for 'Frame' is open, showing options like 'Default [default]', 'Ruler Before [ruler-before]', etc.

# Backend User Interface

---

## Scheduler Task Group

New scheduler task group can be created while editing or creating a task. No need to switch to the list module anymore.

Scheduled tasks

Add task

<b>Disable</b>
<input type="checkbox"/>
<b>Class</b>
Update extension list <span>▼</span>
<b>Type</b>
Recurring <span>▼</span>
<b>Task group</b>
<input type="text"/> <span>▼</span> <span>+</span>

# Backend User Interface

---

## Checkbox Toggle Switches

Checkbox toggle switches allow BE users to switch between states easily

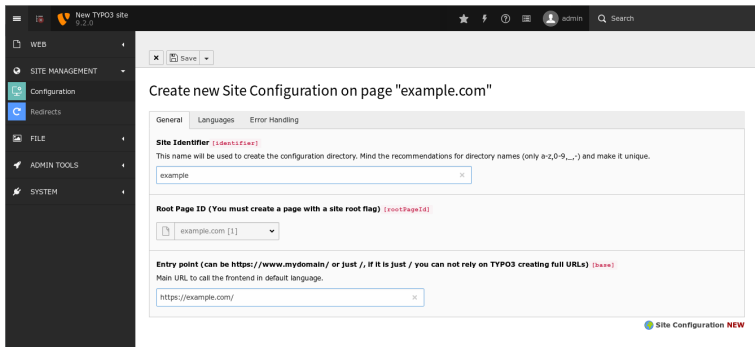

<p><b>single checkbox with toggle</b></p>  foo	<p><b>single checkbox with labeled toggle</b></p>  Disabled foo
<p><b>single checkbox with toggle inverted state display</b></p>  foo	<p><b>single checkbox with multiple labeled toggles</b></p>  Off foo On bar On inv
<p><b>multiple toggles checkbox</b></p>  foo bar baz husel	<p><b>single checkbox with labeled toggle inverted state display</b></p>  Enabled foo

## Chapter 2: Changes for Integrators

# Changes for Integrators

## Site Handling (1)

- New **Site Handling** concept has been introduced in TYPO3 version 9.2
- Backend module: Site Management → Configuration

The screenshot shows the TYPO3 backend interface for creating a new site configuration. The top navigation bar includes the site name "New TYPO3 site 9.2.0", user "admin", and a search bar. The left sidebar shows the "SITE MANAGEMENT" menu with "Configuration" selected. The main content area is titled "Create new Site Configuration on page 'example.com'" and has tabs for "General", "Languages", and "Error Handling". The "General" tab is active and contains three sections:

- Site Identifier** [identifiers]: A text input field containing "example". Below it, a note states: "This name will be used to create the configuration directory. Mind the recommendations for directory names (only a-z,0-9,-) and make it unique."
- Root Page ID** (You must create a page with a site root flag) [rootPageId]: A dropdown menu showing "example.com [1]".
- Entry point** (can be https://www.mydomain/ or just /, if it is just / you can not rely on TYPO3 creating full URLs) [base]: A text input field containing "https://example.com/".

A "Site Configuration NEW" badge is visible in the bottom right corner of the configuration area.

# Changes for Integrators

---

## Site Handling (2)

- Configuration file holds all settings for a given site and is to be located under `typo3conf/sites/<identifier>/config.yaml`
- `<identifier>` may consist of:
  - upper/lower case letters (A-Z and a-z)
  - dash (-)
  - underscore (\_)
  - dot (.)
- Directory `typo3conf/sites/<identifier>/` can be used for further site-related files in the future, e.g. Fluid templates, BE layouts, etc.
- Some TypoScript settings will be set based on content of `config.yaml` automatically

# Changes for Integrators

---

## Mail Queue (1)

- Emails generated by TYPO3 are sent out immediately by default
- TYPO3 v9.2 now supports [SwiftMailer's](#) spool functionality, where message are saved in a queue first and processed later
- Option 1: spool mails in memory  
(emails are only sent, if request got executed without any exceptions or errors)

```
$GLOBALS['TYPO3_CONF_VARS']['MAIL']['transport_spool_type'] = 'memory';
```

- Option 2: spool mails in files

```
$GLOBALS['TYPO3_CONF_VARS']['MAIL']['transport_spool_type'] = 'file';  
$GLOBALS['TYPO3_CONF_VARS']['MAIL']['transport_spool_filepath'] = '/folder/of/choice';
```

# Changes for Integrators

---

## Mail Queue (2)

- The following console command can be used to process the queue and send out spooled emails

Process all spooled emails:

```
$ ./typo3/sysext/core/bin/typo3 swiftmailer:spool:send
```

Process not more than 10 spooled emails:

```
$ ./typo3/sysext/core/bin/typo3 swiftmailer:spool:send --message-limit=10
```

Process spooled emails, but not more than 10 seconds:

```
$ ./typo3/sysext/core/bin/typo3 swiftmailer:spool:send --time-limit=10
```

# Changes for Integrators

---

## Admin Panel Re-Factoring

- Admin Panel will receive a major overhaul to be state-of-the-art again
- As the first step, it was moved into a dedicated system extension (this allows integrators to activate and deactivate the feature as required)
- New API provides more flexible options to add custom modules to the admin panel or to replace and existing modules (see [next chapter](#) for details for developers)

# Changes for Integrators

---

## Progressive Images

- It is now possible to generate progressive images
- This feature needs to be configured in the Install Tool:  
`$GLOBALS['TYPO3_CONF_VARS']['GFX']['processor_interlace']`
- Possible values are:
  - None
  - Line
  - Plane
  - Partition

# Changes for Integrators

---

## Restricted Columns

- Restricted columns can be hidden in the page module, which means, users only see the columns they are allowed to edit or add content to
- The following setting in UserTS controls the behaviour:  
`mod.web_layout.hideRestrictedCols = 1`
- Note: When using backend layouts to provide an abstract view of the frontend, hiding the columns with this setting may break your layout!

# Changes for Integrators

---

## Environment Variable `TYPO3_PATH_APP`

- Environment variable `TYPO3_PATH_APP` allows to store temporary files outside the document root
- Typically located under `typo3temp/var/`, temporary files are for example Install Tool session files, caching framework files, files related to locking or logging, Extension Manager data files or files generated by TYPO3's import/export or core update functions
- Example configuration for the Apache web server:

```
SetEnv TYPO3_PATH_APP /var/www/example.com/
```

Directory structure:

```
/var/www/example.com/htdocs/
```

```
/var/www/example.com/var/
```

# Changes for Integrators

---

## Miscellaneous

- New form element property `validationErrorMessages` allows for the definition of custom validation error messages in Form Editor
- Session data can be used in TypoScript conditions:  
`[globalVar = session:foo|bar = 1234567]`  
(formerly public property `sesData` is not longer available)
- `EXT:sys_note` records can be rendered either in the top or bottom of the page and list module by defining the position in the record itself

## Chapter 3: Changes for Developers

# Changes for Developers

---

## PSR-15 Middlewares Support (1)

- TYPO3 aims to support **PSR-15 standard** out-of-the box
- This will improve interoperability with independent libraries and all requests in the TYPO3 core will return a PSR-7 response
- The PSR-15 standard is defined as follows:  
*[PSR-15] describes common interfaces for HTTP server request handlers (request handlers) and HTTP server middleware components (middleware) that use HTTP messages [...]. HTTP request handlers are a fundamental part of any web application. Server side code receives a request message, processes it, and produces a response message. HTTP middleware is a way to move common request and response processing away from the application layer.*  
See <https://www.php-fig.org/psr/psr-15/> for further details.

# Changes for Developers

---

## PSR-15 Middlewares Support (2)

- To add a middleware to the "frontend" or "backend" middleware stack, create file `Configuration/RequestMiddlewares.php` in the respective extension:

```
return [  
    // stack name: currently 'frontend' or 'backend'  
    'frontend' => [  
        'middleware-identifier' => [  
            'target' => \ACME\Ext\Middleware::class,  
            'description' => '',  
            'before' => [  
                'another-middleware-identifier',  
            ],  
            'after' => [  
                'yet-another-middleware-identifier',  
            ],  
        ],  
    ],  
];
```

# Changes for Developers

---

## PSR-15 Middlewares Support (3)

- If extensions need to shut down or substitute existing middlewares with an own solution, they can disable an existing middleware by adding the following code to the file:

```
return [  
    'frontend' => [  
        'middleware-identifier' => [  
            'disabled' => true,  
        ],  
    ],  
];
```

- Read more about [PSR-15 Initiative](#)

# Changes for Developers

---

## PSR-7 Server Requests

- PSR-7 based ServerRequest objects contain a TYPO3-specific attribute object for normalized server parameters
- The object is **for now** available from ServerRequestInterface \$request objects as an attribute

```
/** @var NormalizedParams $normalizedParams */  
$normalizedParams = $request->getAttribute('normalizedParams');  
$requestPort = $normalizedParams->getRequestPort();
```

- This substitutes GeneralUtility::getIndpEnv() and arguments such as SCRIPT\_NAME, REQUEST\_URI, etc. can be substituted (see [documentation](#) for details)

# Changes for Developers

---

## PSR-7 and PSR-15 Related Changes

- The internal request handler classes have been changed:
  - All methods gained strict argument and return type declarations
  - Instead of calling `HttpUtility::redirect()`, a `RedirectResponse` is returned
  - Instead of returning null a `NullResponse` is returned

# Changes for Developers

---

## Environment Class

- New base API class provides application-wide information related to paths and PHP internals, which were previously exposed via PHP constants: `TYPO3\CMS\Core\Core\Environment`
- The following static API methods are available:
  - `Environment::isCli()`
  - `Environment::getApplicationContext()`
  - `Environment::isComposerMode()`
  - `Environment::getProjectPath()`
  - `Environment::getPublicPath()`
  - `Environment::getVarPath()`
  - `Environment::getConfigPath()`
  - `Environment::getCurrentScript()`
  - `Environment::isWindows()`
  - `Environment::isUnix()`

# Changes for Developers

---

## Search String Constraints

- New hook allows to modify search string constraints:

```
// EXT:my_site/ext_localconf.php
$dbRecordList = \TYPO3\CMS\Recordlist\RecordList\DatabaseRecordList::class;
$GLOBALS['TYPO3_CONF_VARS']['SC_OPTIONS'][$dbRecordList]['makeSearchStringConstraints'][123] =
    \MyVendor\MySite\Hooks\DatabaseRecordListHook::class . '->makeSearchStringConstraints';
```

```
// EXT:my_site/Classes/Hooks/DatabaseRecordListHook.php
namespace MyVendor\MySite\Hooks;
class DatabaseRecordListHook
{
    public function makeSearchStringConstraints(
        \TYPO3\CMS\Core\Database\Query\QueryBuilder $queryBuilder
        array $constraints,
        string $searchString,
        string $table,
        int $currentPid,
    ) {
        return $constraints;
    }
}
```

# Changes for Developers

---

## Signal/Slot for User Switch

- New signal is emitted when an admin user switches to another user in the TYPO3 backend

```
$dispatcher = \TYPO3\CMS\Core\Utility\GeneralUtility::makeInstance(  
    \TYPO3\CMS\Extbase\SignalSlot\Dispatcher::class  
);  
  
$dispatcher->connect(  
    \TYPO3\CMS\Beuser\Controller\BackendUserController::class,  
    'switchUser',  
    \MyVendor\MyExtension\Slots\BackendUserController::class,  
    'switchUser'  
);
```

# Changes for Developers

---

## ViewHelper Changes (1)

- ViewHelper `f:form.textarea` supports two new attributes "readonly" and "required"

```
<!-- Set required attribute -->  
<f:form.textarea name="foobar" required="1" />
```

```
<!-- Set readonly attribute -->  
<f:form.textarea name="foobar" readonly="1" />
```

- ViewHelpers `f:uri.typolink` and `f:uri.typolink` support new attribute "absolute"

```
<f:link.typolink parameter="23" absolute="true">Link</f:link.typolink>  
<f:uri.typolink parameter="23" absolute="true" />
```

- ViewHelper `f:render` supports new attribute "debug" which makes it possible to disable the debug output in some special cases

# Changes for Developers

---

## ViewHelper Changes (2)

- New ViewHelper renders the icon markup based on a FAL resource

```
<core:iconForResource resource="{file}" />
```

# Changes for Developers

---

## Admin Panel Customization

- Admin Panel can be extended by custom modules
- Module registration example:

```
$GLOBALS['TYPO3_CONF_VARS']['EXTCONF']['adminpanel']['modules']['yourmodulename'] = [  
    'module' => \MyVendor\Package\AdminPanel\YourModule::class,  
    'after' => ['preview']  
]
```

## Chapter 4: Deprecated/Removed Functions

# Deprecated/Removed Functions

---

## EXT:lang: Removed Classes

The language pack update module (formerly known as "Admin Tools → Language") has been moved to "Maintenance → Manage language packs".

As a consequence, the following old PHP classes have been removed:

```
TYPO3\CMS\Lang\Command\LanguageUpdateCommand
TYPO3\CMS\Lang\Controller\LanguageController
TYPO3\CMS\Lang\Domain\Model\Extension
TYPO3\CMS\Lang\Domain\Model\Language
TYPO3\CMS\Lang\Domain\Repository\ExtensionRepository
TYPO3\CMS\Lang\Domain\Repository\LanguageRepository
TYPO3\CMS\Lang\Exception
TYPO3\CMS\Lang\Exception\Language
TYPO3\CMS\Lang\Exception\Ter
TYPO3\CMS\Lang\Exception\XmlParser
```

```
TYPO3\CMS\Lang\Service\RegistryService
TYPO3\CMS\Lang\Service\TerService
TYPO3\CMS\Lang\Service\TranslationService
TYPO3\CMS\Lang\View\AbstractJsonView
TYPO3\CMS\Lang\View\Language\ActivateLanguageJson
TYPO3\CMS\Lang\View\Language\DeactivateLanguageJson
TYPO3\CMS\Lang\View\Language\GetTranslationsJson
TYPO3\CMS\Lang\View\Language\RemoveLanguageJson
TYPO3\CMS\Lang\View\Language\UpdateLanguageJson
TYPO3\CMS\Lang\View\Language\UpdateTranslationJson
```

# Deprecated/Removed Functions

---

## Page Not Found and Error Handling

- The following methods have been marked deprecated:

`TYPO3\CMS\Frontend\Controller\TypoScriptFrontendController`

- `->pageUnavailableAndExit()`
  - `->pageNotFoundAndExit()`
  - `->checkPageUnavailableHandler()`
  - `->pageUnavailableHandler()`
  - `->pageNotFoundHandler()`
  - `->pageErrorHandler()`
- **New ErrorController with its custom actions `unavailableAction()`, `pageNotFoundAction()` and `accessDeniedAction()` should be used instead**

# Deprecated/Removed Functions

---

## Admin Panel Refactoring

- As part of the Admin Panel refactoring, the following hook has been marked deprecated:

```
$GLOBALS['TYPO3_CONF_VARS']['SC_OPTIONS']['tslib/class.tslib_adminpanel.php']['extendAdminPanel']
```

- The following corresponding interface has been marked deprecated:

```
\TYPO3\CMS\Frontend\View\AdminPanelViewHookInterface
```

- The following functions of the main class `AdminPanelView` have been marked deprecated:

```
getAdminPanelHeaderData  
isAdminModuleEnabled  
saveConfigOptions  
extGetFeAdminValue  
forcePreview
```

```
isAdminModuleOpen  
extGetHead  
linkSectionHeader  
extGetItem
```

# Deprecated/Removed Functions

---

## Miscellaneous (1)

- Since the removal of ExtJS, JavaScript files that handle the localization of labels in backend modules became obsolete and have been removed
- System extension `sys_note` does not use Extbase anymore
  - The following model has been removed:  
`TYPO3\CMS\SysNote\Domain\Model\SysNote`
  - The following repository returns a plain result now:  
`TYPO3\CMS\SysNote\Domain\Repository\SysNoteRepository`
- `StringFrontend` cache frontend has been marked deprecated
- Icons of `EXT:form` are now available with a new identifier prefix (previously: `t3-form-icon-`, since TYPO3 v9.2: `form-`)

# Deprecated/Removed Functions

---

## Miscellaneous (2)

- Class `TYPO3\CMS\Frontend\Http\EidRequestHandler` has been marked deprecated
- Class `TYPO3\CMS\Backend\Http\AjaxRequestHandler` has been marked deprecated
- Method `TYPO3\CMS\Filelist\FileFacade::getIcon` has been marked deprecated
- The following TypeScript attributes have been marked deprecated:
  - `page.javascriptLibs`
  - `page.javascriptLibs.jQuery`
- Usage of `top.launchView()`, that opens certain information in a popup window, has been marked deprecated

# Deprecated/Removed Functions

---

Many more functions  
have been marked deprecated or removed  
in TYPO3 version 9.2.

Please see the [TYPO3 documentation](#) for further details.

## Chapter 5: Miscellaneous

# Miscellaneous

---

## REST API on [get.typo3.org](https://get.typo3.org)

- <https://get.typo3.org> has been refactored and provides a REST API for information about TYPO3 releases now
- TYPO3 version 9.2 accesses the REST API to check for available upgrades and to download new versions
- Additional information is shown in the system information toolbar
- If the currently used TYPO3 version is out-of-support or has known security issues, an prominent error is shown
